FEP ON "DATA MINING TECHNIQUES"

Objectives:

- To enhance participants' understanding of automatic and semi-automatic data analysis.
- To equip students with advanced skills in extracting meaningful patterns from large datasets, enabling them to apply these techniques in their respective academic and research activities.

Programme Outcome:

The programme effectively introduced participants to various data-oriented techniques for pattern extraction, including association rule discovery, ratio rule mining, and dimensionality reduction methods. The students gained hands-on experience in applying these techniques to real-world datasets, which deepened their understanding of the practical applications of data

mining. The training enabled participants to integrate these advanced data mining techniques into their curricula and research projects, leading to improved analytical capabilities. The programme also endorsed collaboration among faculty members, encouraging the exchange of ideas and best practices in data analysis.
